Ver. 1.0.2

- g. Select "Zones and Rules" from the left hand panel.
 - i. Righ click with in the display.
 - ii. Select Zone/Line.
 - iii. Select "Create Zone" or "Create Line"
 - iv. Place the zone/line at the require loaction

- h. Select the zone or line that was created.
 - i. On the right hand side the panel will reflect the avialable options
 - ii. The following options can be modified;
 - 1. Name: The name should reflect the purpose of the zone/line
 - 2. Color: Change the color so that is stands out with in the display.
 - 3. Presence: The title should reflect the purpose of the rule.
 - iii. Besure to select "APPLY" when done setting the zone/line.
 - iv. Test the effectiveness of the zone/line for detection.
 - 1. Upon detection, and event entry should appear in the bottum view plain.
 - v. If every thing is working, the zone/line is detecting, and registering the event, close out of the browser and launch CORTROL.

Ver. 1.0.2

CORTROL Add Device & Channel

- 1. Now that the PixelPro GXi is configured to drive an event through an Imbeded Intelligence based trip zone/line, it's time to setup CORTORL to look for and respond to the device driven event.
- 2. Adding the PixelPro GXi to CORTROL
 - a. Note: It is expected that the installer has already configured CORTROL for network access.
 - b. Launch the CORTROL Management Console, either directly on the Server, or on a Client PC.
 - c. Log into Management Console.
 - i. Default User ID: admin
 - ii. Default Password: "PW created at time of install/setup of CORTROL"
- 3. Lets add the PixelPro GXi to CORTROL.
 - a. Launch CORTROL Management Console.
 - b. Enter the Username & Password with aurthorization to access the managemante consol.
 - c. From the left hand side of the management console, select "Devices"
 - i. Click on "New device" and enter the following;
 - 1. Title: Model or purpose of the PixelPro GXi camera
 - 2. Model: Vendor/Model CBC (Ganz) / PixelPro GXi ZN series of camera
 - 3. Membership: Selection based on application requirement
 - 4. Permisions: Selection based on application requirement
 - 5. Network: Host URL/IP / Port / Username / Password

- h. At this point "Rules" options such as "Condition", Schedule" and or "Delay" can be added.
- i. When the "Rule" meets the requirement, select "Ok" to save and exit the Configurator.
- 2. The above is a general walk through of creating a VCA event, with a corresponding action.
 - a. Some typical actions from a VCA event are;
 - 1. Activate recording profile
 - 2. Activate substream recording profile
 - 3. Send mail
 - 4. Activate PTZ preset: Typically this is separate PTZ camera from the VCA source.
 - 5. Control digital output
 - 6. Pop-up an object on screen (-s)
 - 7. Highlight on map or all maps where corresponding Action Target is present
 - b. Feel free to use the above and experiement with event and actions with repect to VCA events.

Ver. 1.0.2

CORTROL Playback of the event drive recording

- 1. From CORTROL Client, confirm recording from VCA event driven action.
 - a. From live select the video channel of the PixelPro GXi camera.
 - b. Select the instant playback function.
 - c. Confirm recording for VCA event.

- 2. From CORTROL Client, confirm recording from VCA event driven action.
 - a. Select the Playback function.
 - b. Confirm recording for VCA event.
